

Located in Commack, NY, Bren-Tronics, Inc is a one-stop power shop for military and industrial customers looking for batteries, charging systems, and related accessories and systems. As a supplier for the military, we know that failure is never an option. Our batteries are an excellent and reliable choice for aircraft, transportation, small drones, and many more critical applications.

A CASE STUDY IN SMALL AIRCRAFT

One of our OEM customers is a manufacturer of small, reconnaissance drones. The batteries that we provide for them provide flight times of many hours. The battery, roughly 6 inches on each side with a weight a little over 10lbs, provides approximately 1kWh of energy to the drone.

Our drone batteries are a small package that provides tremendous power and fully support the drones application. Our OEM customer has tested our batteries in the field and has deployed many of them in support of their end users. These fixed wing drones can run autonomously for 3 to 5 hours thanks to our products.

Our products are the result of over 50 years of designing and building energy sources for the military environment.

BREN-TRONICS, INC. HAS A HISTORY OF INNOVATION

Since 1973, we've set out to produce reliable, and eventually rechargeable batteries that could withstand the extreme wear and tear of the military and other industrial applications. We are experts in battery and charger systems, and we continue to push the boundaries of what is possible.
